

NORTHEAST ENERGY EFFICIENCY PARTNERSHIPS

Mid-Atlantic Technical Reference Manual

Completed Regional EM&V Forum Project

Mid-Atlantic Technical Reference Manual

Completed Regional EM&V Forum Project

Version 1 was completed and accepted by the Steering Committee in May 2010.

Version 1.2, which was completed in March 2011, updated the Version 1 TRM based on a critical review of recommendations provided by stakeholders. Version 2 will add about 20 electric and gas measures and will be completed in 2011.

Version 1.2 documents in detail common assumptions for approximately thirty prescriptive residential and commercial/industrial electric energy efficiency measures savings.

A flexible and living document that will be periodically updated with additional measures, modifications to characterizations of existing measures and removal of measures when they are no longer relevant to regional efficiency programs.

Mid-Atlantic Technical Reference Manual

Completed Regional EM&V Forum Project

- For each measure, the TRM includes either specific deemed values or algorithms for calculating:
 - Gross annual electric energy savings;
 - Gross electric summer coincident peak demand savings;
 - Gross annual fossil fuel energy savings (for electric efficiency measures that also save fossil fuels, and for certain measures that can save electricity or fossil fuels);
 - Other resource savings if appropriate (e.g. water savings, O&M impacts);
 - Incremental costs; and
 - Measure lives
