

REMOTELY FOR CONTRACTORS: A VIRTUAL HOME ENERGY AUDIT

Home energy audits are an important tool for improving home energy efficiency. But the traditional process is time-consuming and requires many long trips to visit residences.

**THE REMOTELY APP
SIMPLIFIES THE AUDITING
PROCESS BY STREAMLINING
WORKFLOW AND SAVING
TIME.**

VIRTUAL REALITY

The Remotely app uses smartphone technology, including augmented reality spatial measurements of windows and finished areas, to facilitate the collection of residential energy audit data.

The Remotely app allows the homeowner to conduct their own thorough walkthrough of the home using augmented reality technology while sharing the results with their contractor in real time. Remotely walks the user from data collection to program reporting, Home Energy Score generation, and recommendations for home improvements. Homeowners will also be connected with local contractors and incentive programs to suggest efficiency improvement projects. Contractors will receive a standardized summary of the home characteristics in HPXML format to use for advanced system sizing.

INCENTIVES

Connect homeowners and clients with local Incentives, rebates, and credits for projects.

HOME ENERGY SCORE

Automatically generate an HPXML file, as well as a 1-10 Home Energy Score in compliance with the Department of Energy's labeling requirements.

CONTRACTOR PLATFORM

Contractors can track project milestones, invite team members and generate project documents.
